

# Microsoft Solutions for Fresh Food

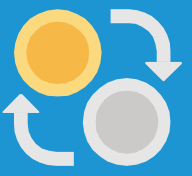

As a fresh food business you have to respond to the demands of retailers and customers, manage supply chain processes, and ensure delivery times and schedules are coordinated. Addressing your operational and business challenges with technology can help you automate and track business activities. Cloud hosting enables access on the roads and in the office, so you can focus on the most important part of your business: increasing cash flow and optimising your production.

## Financials for Office 365, for the Fresh Food Industry

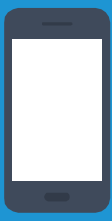

### Optimise produce movement and handling

With Pallet Tracking, gain complete visibility over the pallets and cartons used in shipping to improve the handling and movement of produce.

### Track inventory and prices

Keep tracking of all your items and prices, create bills of materials, and organise your warehouse into bins. With advanced reporting, gain meaningful visibility and insights to enhance decision making.

### Run your business anytime, anywhere

Empower your mobile workforce to work indoors, outdoors, or at home with mobile and tablet apps optimised for touch screen usage.

### Multi-currency to grow with your business

Manage multiple currencies throughout the system, including payables and receivables, general ledger reports, resource and inventory items, and bank accounts to give your business the flexibility to operate across borders.

### Levy management

Manage levies effectively with the right calculation methods and vendor registration. With levy management, eliminate manual processes and easily manage levy requirements.

### Pricing and discounting

With Financials for Office 365, you can manage sales prices and discounting, allowing you to differentiate, attract and maintain customers with minimal maintenance.

### Quality and compliance

Maximise your quality standards and reduce costs and downgrades by ensuring your produce meets compliance requirements.
