

The Market Speed Operating Model

A flexible, agile and dynamic omni speed operating model to respond to the needs of business

Rapidly changing market dynamics require today's organizations to not only transform how they deliver their products to customers, but to also reimagine how they deliver technology within their own business – enabling their organization to adapt at the speed of the market.

The challenge

In this new reality, organizations are experiencing a number of significant challenges:

> Increased complexity, data spread across hybrid, multi-cloud environment

> Architecture misalignment with business and not fit for purpose

> Challenges with scaling modern ways of working

> Increased attack surface and sophistication of threat actors

> Inability to adapt and continuously fund technology investments

> Challenging expectations of ways of working, leadership, and incentives

Traditional IT delivery model:

Monolithic, one-size-fits most delivery methods

Broken supply and demand relationship with the business

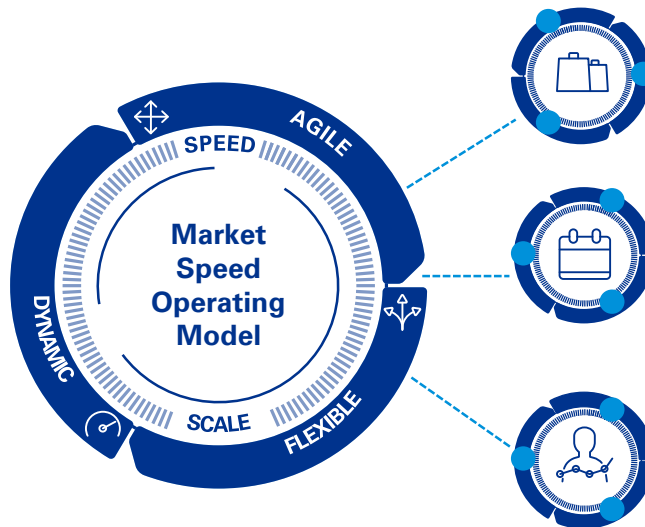

Limited empathy and understanding for the unique business drivers they are supporting

Long planning and funding cycles that leave little room for innovation

The solution

The market speed operating model is a critical enabler of business performance. It is dynamic, with agility and flexibility built-in to **support the unique characteristics of each portfolio.**

All of these micro-operating models are designed to **coexist within the larger IT operating model** governance and structure.

Retail loan portfolio

- Speed
- Security
- Agility

Legacy contract settlements portfolio

- Low cost
- Stability
- Infrequent change

Employee productivity portfolio

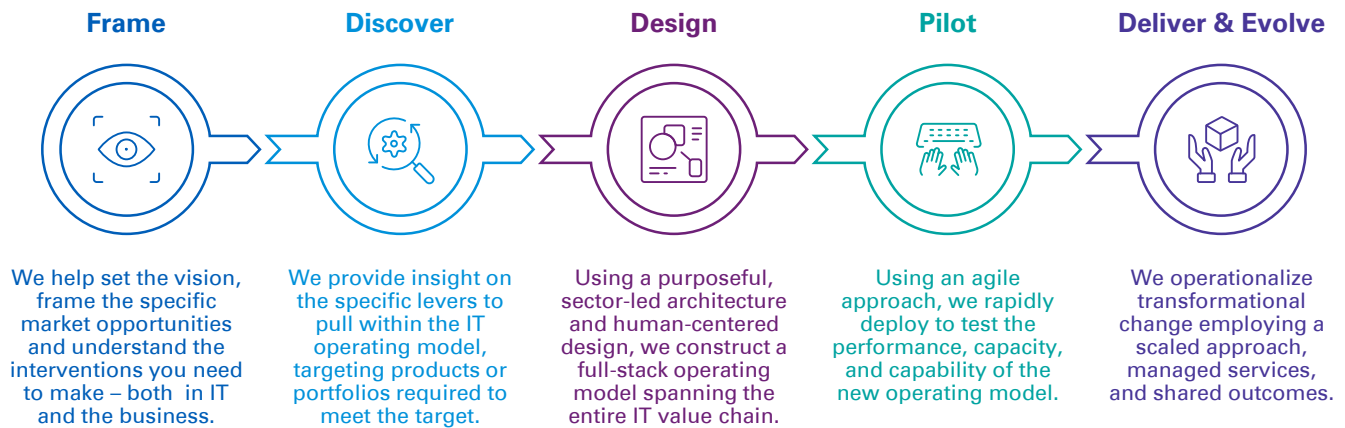

- Secure, everywhere access
- Collaboration
- Personalized insights

Digital leaders are successful at making this shift by moving beyond people, process, and technology, and recognize the need to transform across 6 design layers of the operating model.
