

The power of connection

For your most vulnerable residents, to the health they deserve

The KPMG Resource Integration Suite (KRIS) Connected Platform is the future ready Medicaid enterprise integration solution that seamlessly connects your state agencies, partners, and providers – for the ultimate purpose of connecting your citizens to the healthcare they deserve.

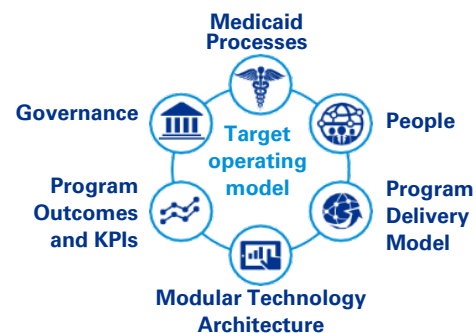

Medicaid agencies across the U.S. continue to focus on transitioning their programs to outcomes based operating models that are worker-friendly, with less provider administrative burden, at a lower cost, and deliver care more efficiently to their most vulnerable populations.

An effective Medicaid enterprise transformation is both program-driven and technical: driven by effective planning and design, is holistically focused, and positions agencies to deliver program outcomes, improve business processes, and leverage a leading, modern Medicaid system integration architecture that will support evolving program goals and regulations.

Driving better program outcomes

A successful transformation will be measured by the outcomes it produces. Medicaid transformation begins with a clear understanding of the agency's target goals and operating model and buy in for those objectives across peer agencies and Medicaid provider partners. Projects should start with the end in mind: the target program outcomes specific to your state's population and agency. Then, connect them to the to be program processes, the data architecture, and technical architecture required for achieving those outcomes. To document and make those connections explicit, KPMG uses its KPMG Enterprise Reference Architecture (KERA) accelerator within the KRIS Connected Platform.

KERA links to-be processes and architecture components to the test requirements for them, and

also to Medicaid Information Technology Architecture (MITA) 3.0 and Medicaid Enterprise Certification Toolkit (MECT) requirements – all built into KERA to support delivery of a modular Medicaid enterprise configured specifically to your state's needs

A connected solution

Migrating your Medicaid operations to a modular architecture while maintaining secure data transfer between the applications requires a scalable, secure, and future-ready solution. It must be built using service oriented architecture that promotes a loosely coupled set of modules providing end-to-end services.

What's in the box?

KRIS collects industry leading third party software, cloud services, and accelerators that KPMG has deployed for many state HHS programs to help mitigate the complexity and costs associated with system modernization.

The KRIS Connected Platform, powered by Red Hat or MuleSoft technologies, integrates the functions and features needed for effective connections in a modular Medicaid enterprise in a modern, secure, cloud based architecture.

And that's not all...

KPMG designed the KRIS Connected Platform to merge market-leading components in a connected solution with a lower total cost of support.

The overall solution architecture can be delivered as a managed service in a secure commercial cloud, either Amazon, Azure, or Google. These commercial clouds enable the KRIS Connected Platform to be scaled up or down as your agency's Medicaid program and policies evolve. Also, our platform's configurable, standards based integration capabilities support the reuse of existing state enterprise modules and resources, regardless of hosting location.

The KRIS Connected Platform **accelerates the configuration and delivery of program solutions, reduces risk, and minimizes cost**, so your agency resources can be focused on their most important job – delivering care to citizens in need.

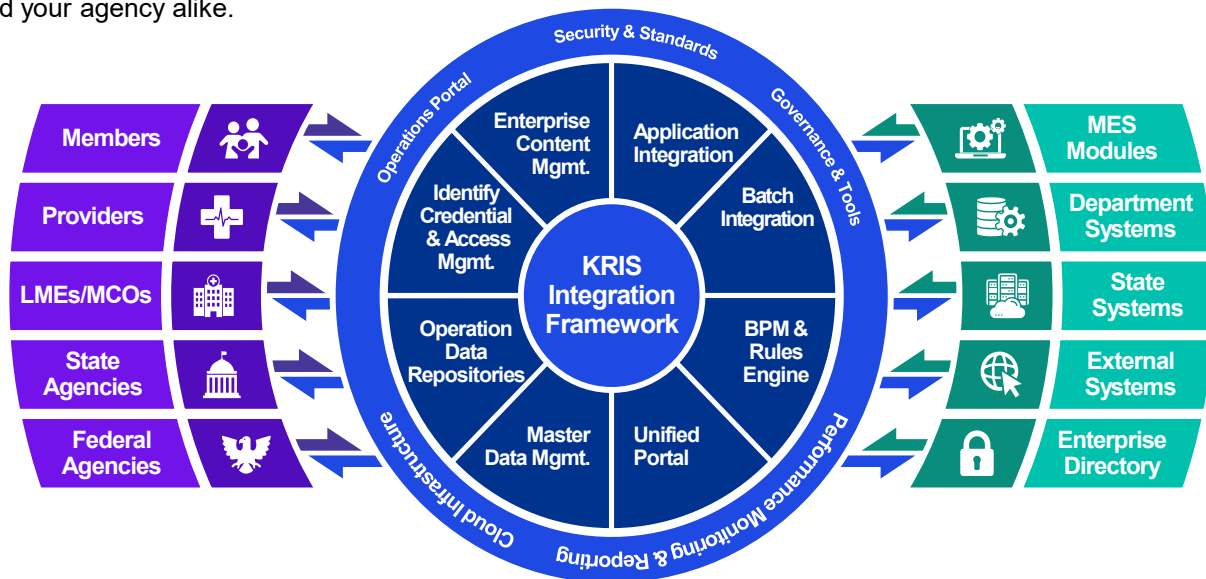

The platform is designed to seamlessly connect multiple vendor technology modules, enabling your project Concept of Operations, and services to members, providers, managed care organizations, and your agency alike.

How does it help you?

- Cloud native to improve reliability and ease of management, and reduce total cost
- Multiple deployment options, including a fully managed SaaS offering or the ability to run on your computing infrastructure
- Scalable, resilient, and elastic to meet the performance needs of your agency
- Extensible to support multi cloud deployment
- Standards compliant to facilitate interoperability with other agencies' module vendors and external interfaces
- Ease of transferability so that your agency has the flexibility to assume ownership at any point
- Modern architecture to future proof your investment: Cloud agnostic, containerized and microservices based

The KRIS Connected Platform provides data exchange integration using a service oriented and microservices approach across partners and module vendors based on a modularized architecture itself.

The future of connected Medicaid is powered by KPMG.

The KRIS Connected Platform can now also be procured via the NASPO Catalog. To learn more, please contact:
