

# How to measure return on investment in RSA Archer implementations

Return on investment (ROI) is a common financial metric used to evaluate the value derived from an investment to determine where and how an organization is spending their resources. It often forms the basis for initial or follow-up decisions to implement GRC programs on RSA Archer, and as such, needs to be a critical part of your planning and execution model.

For GRC implementations, common metrics used to measure ROI are:

- Product licenses
- Professional services for tool implementations
- Ongoing tool administration
- Training and awareness
- Savings through operational efficiencies
- Labor cost savings
- Regulatory savings
- Legacy tools savings.

## Measuring effectiveness of GRC implementation

GRC Implementations can be measured using the following metrics:

**Financial metrics**  
Deliver detailed visibility into the financial impacts of changes to the enterprise risk and compliance posture

|   |  |
|---|--|
| <p><b>People</b><br/>Reduced manually intense labor requirements aligning workforce towards forward looking initiatives</p>  <p><b>Process</b><br/>Risk reduction leading to reduced penalties incurred due to noncompliance</p>  | <p><b>Technology</b><br/>Reduce costs by eliminating multiple siloed tools:</p> <ul style="list-style-type: none"> <li>— Licensing costs</li> <li>— Infrastructure costs</li> <li>— Process administration tools</li> </ul>    |
|---|--|

\*The above charts are examples only.

## Operational effectiveness metrics

Demonstrate improved efficiency, convergence, and consistency through elimination of redundancies and errors

Percentage reduction in **audit findings** across different compliance programs due to risk reduction

Percentage reduction in **incidents** due to early identification of risks

Percentage reduction in time to manage various governance, risk, and compliance functions:

## Qualitative metrics

Deliver detailed visibility into the financial impacts of changes to the enterprise risk and compliance posture

**Consistency:** Established a single system of record with common taxonomy, guiding principles, and centralizing business processes

**Collaboration:** Eliminated silos and fostered collaboration across different business groups

**Customer satisfaction:** Enabled users through simplified processes and enhanced user experience

**Business agility:** Facilitated the ability to make better strategic decisions using risk and compliance information

**Maturity:** Improved overall maturity in compliance programs through clearer alignment with industry standards

**Visibility:** Empowered executives with real-time reporting to raise visibility of overall risk, compliance, and security posture

\*The above charts are examples only.

### Key considerations

- Evaluate the ROI on a reoccurring basis before, throughout, and after the program implementation by collecting customer feedback and analyzing predefined KPIs.
- Make cost and benefit projections at least three years out to come up with benefits that are comparable to costs to build a well-rounded long-term business case.
- Baseline projected savings considering organizational culture and how quickly the end users can adopt new programs and solutions.
- Identify champions that use and promote system adoption and will serve as a valuable feedback loop.
- Don't overlook the strategic costs to guide the organizational roles and responsibilities, training and awareness, process improvements, and other elements that are critical for a successful GRC implementation.
- Don't lose focus on the vision of what GRC can offer to your organization over time.
