

# Infusing efficiency into medical device management

Medical devices are an integral part of patient care today. Patients and clinicians alike rely on these devices and their data, which is why healthcare organizations make it a priority to keep their devices operational and secure.

The ability to efficiently and effectively track use and maintenance requirements for a fleet of medical devices across their lifecycles is an operational challenge that healthcare organizations must solve in order for medical staff to provide the seamless and convenient care that patients expect.

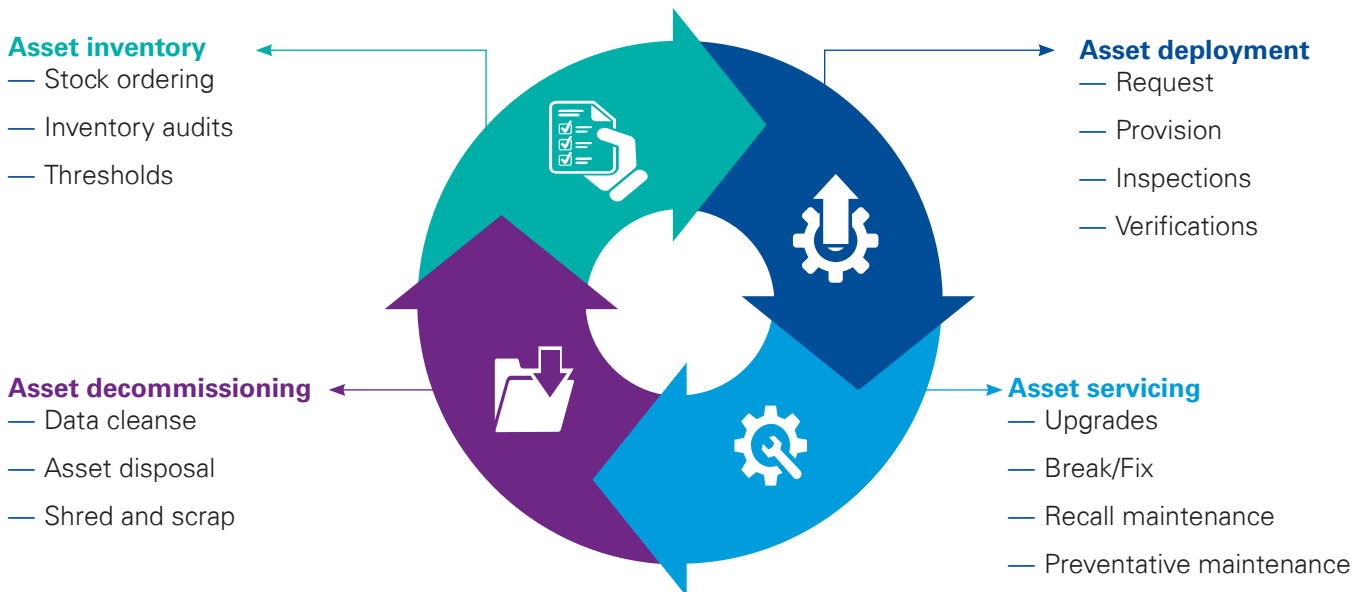

By automating the processes for preventative and corrective maintenance of medical devices, healthcare organizations gain clarity to device status and can

get them back in physicians' hands faster—ultimately helping medical teams spend less time managing device inventory and more time providing patient care. With tighter processes and controls, device security is improved as well.

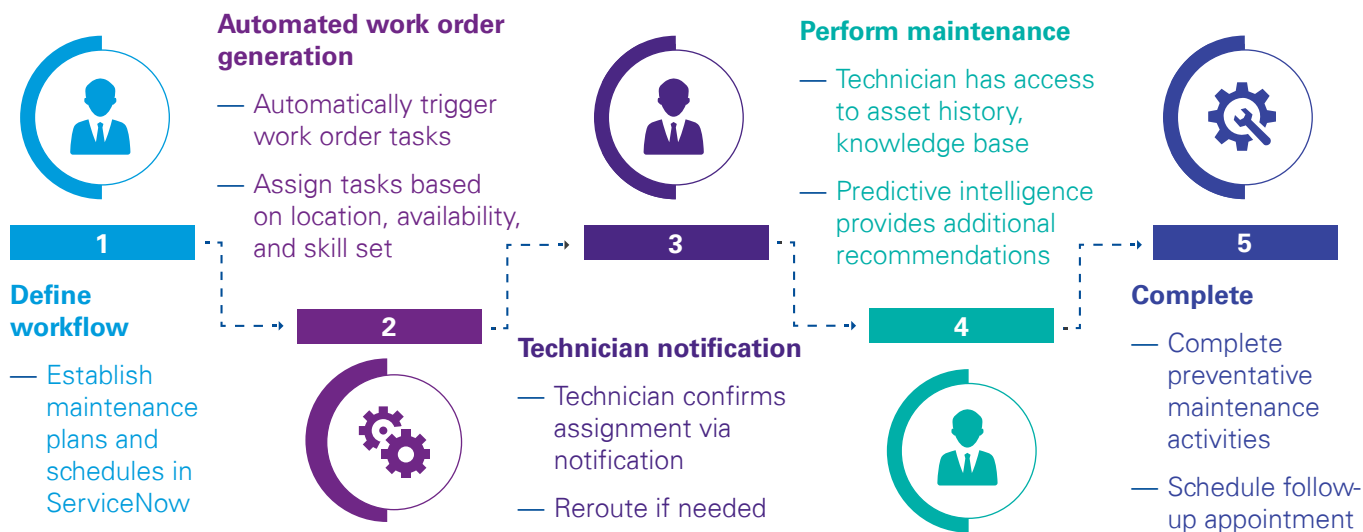

KPMG offers an approach that gives medical teams the ability to reserve, checkout, and return devices based on need, while visibility of critical asset data remains available and maintained. We apply our experience in healthcare technology and our alliance with ServiceNow to support your organization's healthcare priorities.

## Full asset lifecycle management

Automated asset lifecycle activity, updates, reporting, and audit train

## Preventative maintenance workflow
