## Web Access Management modernization: Modernizing legacy Identity and Access Management solutions to enable new digital business initiatives

Modernizing legacy Identity and Access Management (IAM) enables support of new modern applications, cloud deployment, and APIs to drive new digital business initiatives that reduce cost and improve productivity.

Accommodating remote employees, complex partnerships, modern protocols, mobile applications and the cloud were not requirements when legacy vendors built IAM systems for employees accessing resources within the firewall.

Today, these legacy Web Access Management (WAM) solutions are creating challenges in many organizations, including:

- Performance problems, outages, and access/security deficiencies that hamper user productivity
- Excessive legacy IAM support, license and administrative costs and complexity
- Preventing and/or delaying rollout and access to diverse cloud, API, and mobile applications.

### **KPMG and Ping Identity, Inc. – What sets us apart**

Together, KPMG LLP (KPMG) and Ping Identity, Inc. are collaborating to help organizations plan, architect, configure, and implement secure, enterprise-grade modern IAM solutions that support digital transformation and enhance organization's security compliance posture.

The Ping Identity, Inc. and KPMG alliance provides clients with flexible, large-scale identity and access management solutions for the enterprise as well as secure access solutions that enable a wide range of digital transformation initiatives.

Together, KPMG and Ping Identity, Inc. enable organizations to modernize WAM solutions and enable organizations to:

- Centralize access management for Web applications and APIs
- Support new initiatives with open standards and deployment flexibility while reducing administrative costs
- Improve employee and partner productivity by giving users easy access to the resources they need.

### **Why WAM modernization from Ping Identity, Inc. and KPMG?**

Modern IAM solutions from Ping Identity, Inc. are built on open standards and provide employees and partners secure access on most devices and help organizations lower costs, improve security, and support their new digital business initiatives.

- Centralized policies and session management across Web, mobile, and APIs allows you to securely expose internal apps in any domain to remote users without the need for VPN configuration
- Legacy and modern application support including SAML, REST APIs, SCIM, OAuth 2.0, and OpenID Connect (OIDC)
- Quick onboarding of new employees and partners with hundreds of out-of-the-box enterprise integrations
- Enhanced security with URL level and HTTP method access control and upgraded session management
- Lower TCO due to lightweight hardware footprints and a cloud-ready access management solution

### **The KPMG Access Management Orchestration Suite (KAMOS)**

- KPMG's purpose built tools for migrating policies and applications off of legacy web access management systems
- DevOps policy automation and management capabilities

## KPMG services

KPMG's cyber and cross-functional professionals help enable clients to implement a secure, enterprise-wide approach to modernize legacy IAM solutions.

Our services include:

### WAM modernization strategy:

- Assess alignment of current IAM implementation to the business vision and industry leading practices and identify gaps.
- Conduct capability and maturity assessment.
- Assist with development of a business-aligned IAM strategy and road map, business case, policies, standards, target operating model, and key performance indicators to support centralized access control.

### IAM requirements, architecture, and design:

- Assist with development of IAM requirements that are custom to your enterprise's unique technology architecture and complex user populations.
- Our cross-functional professionals use KPMG's reference architecture to help build a tailored WAM modernization solution with diverse business offerings and services.

### IAM vendor evaluation and selection assistance:

- Evaluate core requirements to select IAM and cloud technologies to help clients achieve their WAM modernization goals.
- Special attention is paid to support open standards, ease of integration, and delivery for high availability and scalability.

### IAM implementation and adoption support:

- Assist with the implementation of products and services based on the requirements and architecture designed for WAM modernization.
- Assist with conducting road shows and internal communications. Our change management professionals help manage people and process change; our analysts support rapid application onboarding; and our subject matter professionals assist with technical onboarding and migration.

KPMG Access Management Orchestration Suite (KAMOS) is a toolkit that is tightly integrated with Ping Identity's Ping Access and PingFederate solutions.

- Policy migration module provides capabilities for automatically mapping existing legacy WAM policies and agent configurations and enables an authorized administrator to efficiently move these objects interactively into PingAccess and Ping Federate.
- Policy test module provides capabilities to test policies for accuracy and performance before deploying them across the network.
- Policy promotion module provides the system administrator the capability to promote (push) policies across lower environments and into production.
- Monitoring dashboard module provides runtime components of the platform scalability.

**Deliver a consistent and secure customer experience across all channels.**

**Strengthen security and mitigate risk.**

**Scale to enterprise needs.**
