

Technology-Enabled Transformation: Public Sector Transits and Government Authorities

KPMG Powered Enterprise for Transits and Authorities enabled by Oracle

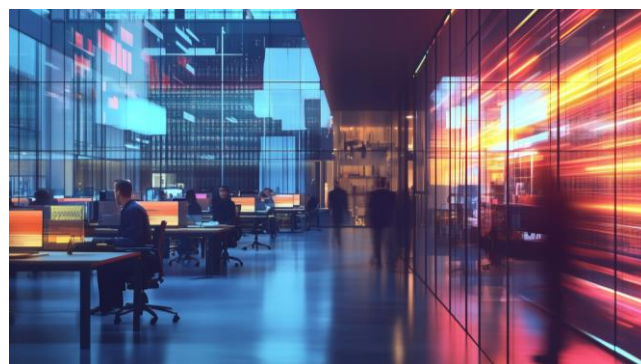

Emerging technologies are reshaping how public sector transit organizations and government authorities address evolving operational and legislative challenges while driving economic, equity, workforce and environmental outcomes.

KPMG: Delivering meaningful transformations

For more than 40 years, we have helped some of the largest and best-managed transits and government authorities (airports, seaports, DOTs, public transportation rail, bus, demand transit, and paratransit) by bringing an understanding of the financial, operational and human capital drivers as they have worked to become even better and stronger operators and competitors.

In particular, transits and authorities rely on ERP systems to support growing service areas, address human capital needs, increased linear and fixed asset inventories, and complex financial/funding arrangements via grants, local funds, and capital budgets. As such, it is critical that not only transit and authorities select a dynamic and scalable ERP solution but build a solution that can support integration with other mission critical platforms including asset and materials management, project management and accounting, and inventory management.

KPMG LLP helps organizations adapt to new environments by modernizing operating models, business models, leveraging data and advanced technologies, and increasing operational efficiencies. From planning to implementation to managed services, KPMG Powered Enterprise for Transits and

authorities, enabled by Oracle, helps clients create tailored, data- driven solutions for Human Resources (HR), Finance, Procurement, Inventory, Supply Chain Management, Asset Management and more to help governments navigate challenges to deliver value, drive innovation, and build stakeholder trust. Our Powered Enterprise for Transits and Authorities is built to help transit and authority entities:

- **Leverage** new and disruptive technologies to enable future business models.
- **Enhance** return on investment for infrastructure and technology assets.
- **Implement** change to drive results that are cost effective and value-driven.
- **Enable** people with the right tools to be more effective and efficient.
- **Establish** governance and transparency that instills confidence in the organization.

60%

of leaders are very focused on **enhancing IT and data systems** to improve decisions and efficiency.

67%

of leaders named **Cloud as the top technology** that would help their agency overcome its current technology challenges.

94%

said implementing new technologies will be **moderately to very difficult.***
